

TIPS

How to tare

STEP 1

Put the Empty Container on the Scale:

Place the empty container on the scale before you weigh anything.

STEP 2

Reset the Scale (Tare):

Press the "tare" or "zero" button on the scale. This makes the scale start from zero, taking the weight of the empty container.

STEP 3

Add Items to the Container:

The displayed weight only shows the net weight of the items you add to the container. It doesn't include the weight of the container.
